Education

B.Tech. / B.E.

Computers, Information Technology

Jaipur Engineering College and Research Centre

08/2015 - 08/2019

Jaipur, India

Expertise

- PYSPARK
- SQL
- HADOOP
- HIVE
- DATABRICKS
- ADF
- AZURE
- SNOWFLAKE
- PYTHON

ACHIEVEMENTS

On-Spot Award

Pat on the back Award

CERTIFICATES

- DP-203
- DP-900
- AI-900
- AZ-900
- HADOOP
- IBM - DATA SCIENCE

Experience

02/2026 - Present

Data Architect/ Associate Manager at “[Improzo Solutions pvt. Ltd.](#)” [Kolkata, India](#)

I oversee end-to-end project delivery as an Associate Manager and Data Architect, translating client business and IT requirements into scalable data solutions. I lead architecture, data modeling, pipeline design, development, testing, and implementation while collaborating directly with clients to drive effective solutions and ensure successful project delivery.

11/2021 - 02/2026

Lead Data Engineer at “[Coforge pvt.ltd](#)” [Kolkata, India](#)

I oversee client requirements and business needs, concentrating on data modeling along with the design, creation of pipelines, testing, and maintenance of intricate data processing systems for extensive datasets. My contributions to various data pipelines and comprehensive projects have garnered appreciation from clients.

09/2021 - 11/2021

Consultant at “[Xebia IT Architects India pvt ltd.](#)” [Kolkata, India](#)

Designed architecture and created pipeline POC for a new client, also got recognized by client.

07/2019 - 09/2021

Systems Engineer at “[Tata consultancy services Ltd.](#)” [Pune, India](#)

Developed and managed multiple end-to-end projects, receiving client and manager appreciation for timely deployment. Possess strong analytical, planning, data modeling, and organizational skills, effectively handling competing demands with large data sets.

Projects

DataPulse

Built an optimized data warehouse using Azure Blob and Snowflake, reducing query times and enabling faster Tableau dashboard loading.

Customer/Outlet Variance

Developed a pipeline that does data transformation as per business logic and creates a variance report between last week's data and current week's data in the form of pivot.

PreCall Kpi

Created an end-to-end pipeline that extracts data from various sources, applies transformation logic and business rules, and updates Veeva CRM (Salesforce) to provide field users with fresh reports every 3 hours.

QAQC Framework

Developed an architecture and pipeline to identify data discrepancies in life sciences, ensuring synchronization of data across CRM, MDM, and Blob storage systems.

ILV (Low Value) Transactions

Contributed to an agile team by analyzing source data and creating Pyspark pipelines for Tableau visualization. Implemented complex requirements using custom transformations, aggregations, and window functions on data frames.

Customer Exposure

Designed an architecture/pipeline and created complex SQL queries to retrieve search results from hive tables on customer data. Additionally, developed a web portal for users to validate threats or suspicious activities.

AML Insights - Counter Party Search

Developed an end-to-end design/architecture and PySpark pipeline for data transformations and aggregations to create a web search portal based on client requirements.
