PROFESSIONAL SUMMARY

Data Architect & Lead Data Engineer with 7+ years of experience delivering scalable data solutions across life sciences, financial services, and retail. Skilled in translating business requirements into performing architectures, pipelines, and data models. Experienced with AI/ML integration for modern data products.

TECHNICAL SKILLS

PySpark, Python, SQL, Snowflake, Snowpark ML, Snowflake Cortex, Streamlit, Azure Data Factory, Databricks, Hive, Hadoop, Linux, XGBoost, Entity Resolution, MDM, Snowflake Model Registry, Snowflake Tasks

PROFESSIONAL EXPERIENCE

Data Architect / Associate Manager | Improzo Solutions Pvt., Ltd., Kolkata

™ 02/2026 - Present

- Lead end-to-end data solutions by translating business and IT requirements into scalable, enterprise-grade architectures. Serve as a Data Architect, driving data modeling, pipeline development, testing, optimization, and production deployment while ensuring alignment with business objectives. Lead and mentor a team of 8 members, providing technical direction and overseeing delivery across projects. Collaborate directly with clients and stakeholders to define solutions, align technical strategies with business goals, and deliver high-quality data platforms.

Lead Data Engineer | Coforge Pvt. Ltd., Kolkata

™ 11/2021 - 02/2026

- Oversee the design, development, and maintenance of complex data processing systems handling large-scale datasets. Lead a team of 5 members while driving end-to-end data engineering initiatives, including data modeling, pipeline development and optimization, automated testing, and data quality assurance. Collaborate with stakeholders to deliver scalable and reliable data solutions, with contributions recognized by clients for their impact on critical data initiatives.

Consultant | Xebia IT Architects India Pvt. Ltd., Kolkata

™ 09/2021 - 11/2021

- Designed system architecture and delivered a pipeline proof-of-concept for a new client engagement. Received client recognition for rapid, high-quality delivery.

Systems Engineer | Tata Consultancy Services Ltd., Pune

™ 07/2019 - 09/2021

- Developed and managed multiple projects from requirements through deployment. Applied analytical and organizational skills to handle large datasets and meet tight delivery timelines.

PROJECTS

AI-Assisted MDM Data Stewardship — Snowflake-native HCP/outlet entity resolution across IQVIA, Knipper, Amazon and OneKey.

Standardization runs with Snowpark Python, candidate blocking and rule scoring in SQL, Cortex embeddings and cosine similarity for matching, Cortex LLM adjudication only for medium-confidence cases, and a Streamlit-in-Snowflake stewardship queue.

AI Call Planning / Next-Best-Action — Snowflake-native call-planning solution using MTRX, call activity and territory goals to engineer HCP features, train an XGBoost model through Snowpark ML, version it in Snowflake Model Registry, score weekly through Snowflake Tasks, and surface recommended calls through Streamlit.

DataPulse — Optimized a data warehouse using Azure Blob and Snowflake, reducing query times and enabling faster Tableau dashboard loading.

Customer/Outlet Variance — Transformation pipeline applying business logic and generating a pivot-based variance report comparing the previous week's data with the current week..

PreCall KPI — End-to-end pipeline extracting data from multiple sources, applying transformation logic and business rules, and updating Veeva CRM / Salesforce so field users receive fresh reports every three hours.

QACC Framework — Architecture and pipeline to identify discrepancies in life science data, ensuring synchronization across CRM, MDM, and data warehouse Strategy.

IVL / Information Systems — Analyzed source data and created PySpark pipelines for Tableau visualization, implementing custom transformations, aggregations and window functions to identify customer suspicious activities.

Customer Exposure — Designed an architecture and complex SQL queries over Hive data to retrieve customer search results, alongside a web portal for threat and suspicious-activity validation.

AML Insights — Counter Party Search — End-to-end PySpark pipeline for transformations and aggregations with a web search portal per client requirements.

EDUCATION

BTech., Computer Science & IT Jaipur Engineering College and Research Centre | 08/2015 - 08/2019
